

Curriculum Vitae

Bio for Piet C. de Groen, M.D.

Dr. Piet de Groen is consultant in Gastroenterology and Hepatology at the Mayo Clinic in Rochester, MN, with a joint appointment in the Division of Biomedical Informatics. He is Professor in Medicine and Gastroenterology at Mayo Medical School and Adjunct Professor in Biomedical Informatics at the Arizona State University.

Dr. de Groen's clinical research objective is to decrease the mortality due to hepatocellular cancer (cancer of the liver cells) and cholangiocarcinoma (cancer of the bile ducts) by actively pursuing early detection of these diseases in patients at risk, develop new or improve current diagnostic modalities, and finally investigate new treatment options.

In addition, Dr. de Groen has an interest in bioinformatics. He has led the development of web-based databases and applications for the Mayo Clinic Cancer Center in Rochester and currently is the Program Director at Mayo Clinic Rochester of the Mayo Clinic/IBM Computational Biology Collaboration which is developing a comprehensive prototype system (the Mayo Clinic Life Sciences System) for access to and interpretation of clinical, genomic as well as proteomic data.
